

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

CANARA ENGINEERING COLLEGE

Programme: **B.E.**

CCA: COURSE PROJECT

Semester: **VI**

Course Title: **Blockchain Technology**

Course Code: **BCS613A**

Date: **03/03/2026**

Submission: **30/04/2026**

Section: **B**

Group	Project No	Mini-Project Title
G1	P1	Create a Simple Blockchain: Build a basic blockchain from scratch using Python or JavaScript.
G2	P2	Simple Cryptocurrency: Build a basic cryptocurrency with wallet creation and transaction functionality.
G3	P3	Hello World Smart Contract: Write and deploy a basic "Hello World" smart contract on Ethereum.
G4	P4	File Storage DApp: Develop a basic decentralized file storage system.
G5	P5	Data Integrity Checker: Create a tool to verify the integrity of data stored on a blockchain.
G6	P6	Blockchain-Based Reward System: Create a reward system using blockchain tokens.
G7	P7	Decentralized Meme Sharing Platform: Build a platform to share memes on the blockchain.
G8	P8	Merkle Tree Implementation: Create a Merkle tree to verify transactions in a block.
G9	P9	Token Creation: Create an ERC-20 token on Ethereum using Solidity.
G10	P10	Voting System: Create a decentralized voting system using smart contracts.
G11	P11	Identity Verification DApp: Create a system for decentralized identity verification.
G12	P12	Academic Certificate Verification: Develop a system to verify academic certificates using blockchain
G13	P13	Blockchain Hashing: Implement a hashing mechanism for blocks to ensure data integrity.
G14	P14	Crypto Wallet: Develop a simple wallet to store and manage cryptocurrency.
G15	P15	Transaction System: Implement a system to send and receive cryptocurrency between users.
G16	P16	Coin Mining Simulation: Simulate a Proof-of-Work (PoW) mining process.

G17	P17	Auction System: Build a smart contract for a simple auction system.
G18	P18	Escrow Service: Implement an escrow service using smart contracts.
G19	P19	Lottery System: Develop a decentralized lottery system using blockchain.
G20	P20	Supply Chain Tracking: Build a simple supply chain tracking system using blockchain.
G21	P21	Document Timestamping: Implement a system to timestamp documents using blockchain.
G22	P22	Health Record System: Build a simple blockchain-based health record management system.
G23	P23	Blockchain API: Build a simple API to interact with a blockchain.
G24	P24	Blockchain-Based Charity System: Build a system to track donations and ensure transparency in charity.
G25	P25	Create a smart contract for crowdfunding campaigns.
G26	P26	Multi-signature Wallet - Implement a multi-signature wallet that requires more than one user to authorize a transaction.
G27	P27	Blockchain-based Event Ticketing - Build a decentralized event ticketing system where users can buy, sell, and verify event tickets using blockchain.
G28	P28	Decentralized Lending System - Create a blockchain-based peer-to-peer lending platform where users can lend and borrow funds securely.
G29	P29	Decentralized Event Management - Create a platform for organizing and managing events.
G30	P30	Decentralized Expense Tracker - Create a system for tracking personal or business expenses.
G31	P31	Create a basic Blockchain-based reward system where users earn tokens for completing simple tasks (e.g., posting content, logging in daily).
G32	P32	Develop a simple system where users upload a document, and the system stores its hash on the Blockchain to verify authenticity later.

Student Groups:

4CB23CS066 & 4CB23CS067 => G1	4CB23CS100 & 4CB23CS101 => G18
4CB23CS068 & 4CB23CS069 => G2	4CB23CS102 & 4CB23CS103 => G19
4CB23CS070 & 4CB23CS071 => G3	4CB23CS104 & 4CB23CS105 => G20
4CB23CS072 & 4CB23CS073 => G4	4CB23CS106 & 4CB23CS107 => G21
4CB23CS074 & 4CB23CS075 => G5	4CB23CS108 & 4CB23CS109 => G22
4CB23CS076 & 4CB23CS077 => G6	4CB23CS110 & 4CB23CS111 => G23
4CB23CS078 & 4CB23CS079 => G7	4CB23CS112 & 4CB23CS113 => G24

4CB23CS080 & 4CB23CS081 => G8	4CB23CS114 & 4CB23CS115 => G25
4CB23CS082 & 4CB23CS083 => G9	4CB23CS116 & 4CB23CS117 => G26
4CB23CS084 & 4CB23CS085 => G10	4CB23CS118 & 4CB23CS119 => G27
4CB23CS086 & 4CB23CS087 => G11	4CB23CS120 & 4CB23CS121 => G28
4CB22CS088 & 4CB22CS089 => G12	4CB23CS122 & 4CB23CS123 => G29
4CB22CS090 & 4CB22CS091 => G13	4CB23CS124 & 4CB23CS125 => G30
4CB23CS092 & 4CB23CS093 => G14	4CB23CS126 & 4CB24CS400 => G31
4CB23CS094 & 4CB23CS095 => G15	4CB24CS401 => G32
4CB23CS096 & 4CB23CS097 => G16	
4CB23CS098 & 4CB23CS099 => G17	

Rubrics for Assessment:

Sl. No.	Criteria for Evaluation	Marks
1	Punctuality in completion and submission	5
2	Readability of program/code (Comments, coding standards and best practices)	5
3	Relevance of software requirements, suitability & coverage of Block chain Technology concepts used in the project	5
4	Presentation and Demo	5
5	Brief report and Academic Honesty (Ethics)	5

Instructions to Students:

1. Course project report (max. 8 pages) should be submitted in print format. Prints should be pasted on the assignment book sheets in the sequence (title, description of requirements, Design diagram & code).
2. Do not copy the report contents of other candidates or from online resources. If plagiarism is observed, the report of such candidates will be rejected.
3. The completed report should be submitted to the course instructor on or before **30/04/2026**.
4. Marks distribution is tabulated in the above table, the same criteria will be adapted for evaluation of the project
